

Project Git Commit History Summary

College Info Assistant

Development Timeline: December 8, 2025 – February 22, 2026

Executive Summary

This document provides a comprehensive summary of the Git commit history for the **College Info Assistant** project. Over the course of approximately two and a half months, the project evolved from an initial experimental setup into a fully containerized, full-stack web application featuring Role-Based Access Control (RBAC), an AI-driven Retrieval-Augmented Generation (RAG) pipeline, and multiple distinct user interfaces.

Key Project Statistics:

- **Total Commits Analyzed:** 46
- **Development Period:** Dec 8, 2025 – Feb 22, 2026
- **Core Technologies:** React, Tailwind CSS, FastAPI, PostgreSQL, Supabase, LangChain, Docker, AWS Copilot.

Contributor Overview

The repository shows highly collaborative development driven by three primary authors, each contributing to different layers of the architecture:

- **Karthiya Yash Kiranbhai (NotYash1066):** Focused heavily on DevOps, infrastructure, and core backend architecture. Key contributions include initial project scaffolding, Docker containerization, AWS Copilot deployment setup, RAG chunking improvements, notification systems, and React-Markdown integration.
- **Madhav Javia (madhav2710):** Spearheaded the frontend development and UI/UX flows. Key contributions include the Super Admin and Admin dashboards, Chat interface with history, guest chat fallbacks, user signup flows, college selection components, and foundational FastAPI/ChromaDB integrations.
- **VISHV44:** Drove critical data workflows, AI modeling, and database management. Key contributions include integrating Supabase vector stores, advanced RAG fallback and error handling configurations, workflow validations, document processing scheduling, and schema migration strategies.

Development Phases & Milestones

Phase 1: Project Initialization & Scaffolding (December 2025)

The project began with basic explorations of vector databases (ChromaDB) and AI toolchains (LangChain). Shortly after, the foundational frontend and backend structures were established.

- **Dec 08:** Repository initialized; README and ChromaDB demo notebooks added.

- **Dec 15:** FastAPI backend initialized with PostgreSQL database connection. React frontend scaffolded using shadcn/ui and Tailwind CSS.
- **Dec 22:** Frontend segmented into distinct Admin and User spaces. Initial RAG document extraction scripts introduced.

Phase 2: Core Features, RAG, and RBAC Integration (January 2026)

This phase saw the highest development velocity, focusing on user authentication, role-based dashboards, and connecting the AI pipeline to the application interfaces.

- **Jan 03–04:** End-to-end authentication implemented. Basic RAG processing (extraction + embedding) linked to a functional student chat interface. Admin Dashboard for document management merged.
- **Jan 05:** Document approval workflows added. RAG pipeline enhanced with better chunking and multi-chunk retrieval directly querying Supabase vector stores.
- **Jan 12:** Super Admin APIs and UI introduced for global statistics and college management.
- **Jan 19:** Comprehensive configuration management system added. Super Admin CRUD operations finalized. Guest chat capabilities with RAG fallbacks deployed.
- **Jan 24–25:** Chat history sidebar integrated. College selection mandated for guests and users to improve context accuracy.

Phase 3: Stabilization, Consolidation, and Deployment (February 2026)

The final recorded phase focused on preparing the application for production, resolving technical debt, and implementing robust deployment strategies.

- **Feb 09–13:** Database schemas unified into a single project structure. Supabase migration flows unified and legacy scripts archived.
- **Feb 21:** Custom Markdown parser replaced with react-markdown and remark-gfm for reliable UI rendering.
- **Feb 21:** Complete Docker runtime stack finalized (Single-container Caddy + Uvicorn deployment).
- **Feb 22:** AWS Copilot configurations introduced for automated API deployment.

Highlighted Changelog

The following is a curated list of the most impactful commits that defined the project's architecture and capabilities.

Date	Author	Commit Message / Feature
Dec 08, 2025	Madhav Javia	Initial setup: Add project README and ChromaDB demo notebook.
Dec 15, 2025	Madhav Javia	Add FastAPI backend with PostgreSQL database connection.
Dec 15, 2025	Yash Kiranbhai	Initialize React frontend with shadcn/ui and Tailwind.

Dec 22, 2025	VISHV44	Created Admin UI and moved chat section to distinct User frontend.
Jan 03, 2026	Yash Kiranbhai	End-to-end authentication and role-based access control (RBAC).
Jan 04, 2026	Yash Kiranbhai	Add notification and approval system for document workflows.
Jan 05, 2026	VISHV44	Add Supabase vector store integration to RAG pipeline.
Jan 12, 2026	Madhav Javia	Add Super Admin dashboard, global stats, and management APIs.
Jan 19, 2026	Madhav Javia	Add guest chat and user signup with college selection.
Jan 19, 2026	VISHV44	Enhance RAG config, fallback, circuit breaker logic, and error handling.
Jan 24, 2026	Madhav Javia	Add chat history sidebar and improve chat UI.
Jan 25, 2026	Madhav Javia	Add college selection for guest chat and UI improvements.
Feb 09, 2026	Yash Kiranbhai	Migrated database to use only one unified schema.
Feb 13, 2026	Yash Kiranbhai	Unify Supabase migration flow and improve guest chat fallback.
Feb 21, 2026	Yash Kiranbhai	Replace custom markdown parser with react-markdown and remark-gfm.
Feb 21, 2026	Yash Kiranbhai	Finalize single-container Caddy + Uvicorn deployment (Docker runtime stack).
Feb 22, 2026	Yash Kiranbhai	Set up initial AWS Copilot configuration for API deployment.
